July 25, 2005

TO: Mr. Michael McGinty, Principal Bright Horizons Center

- FROM: Kenneth I. Partee, Project Manager, Occupational Health and Environmental Control Risk Management Department
- SUBJECT: Indoor Air Quality (IAQ) Assessment FISH 211A

On July 19, 2005 the IAQ Assessment Team conducted an assessment of FISH 211A at **Bright Horizons Center**. The evaluation consisted of a walkthrough of the identified areas to assess the current condition of the location with regard to indoor air quality. This assessment included observations of the carpet, floor tile, ceiling tile, interior walls, false ceiling plenum, and accessible ventilation equipment.

Attached are the findings of this assessment along with recommendations for further assessment, remediation, or corrective actions, if needed.

Generally, the IAQ Assessment did not identify any existing conditions significantly impacting IAQ and thereby presenting immediate health and safety concerns to building occupants. However, due to individual sensitivities and predisposing health factors, it is possible that some building occupants may elicit a health response to agents and / or conditions identified during the evaluation. Therefore, to further improve IAQ, prevent development of future IAQ-related problems, and to reduce the potential for IAQ-related complaints by building occupants, the IAQ Assessment Team recommends appropriate follow up of each item identified and listed in the attached evaluation.

Should any questions arise, or if the current concerns continue after the attached recommendations have been addressed, please feel free to contact me at 754-321-3200.

Ceiling at Supply Grills				N/A		
Surfaces in Room	No	Yes		Clean as approp	iate	

Observations

Findings: Room described as a pool storage closet

- Custodial staff advised that roof top AHU has not worked for 6 months

- Air vent is loud
- Visible microbial growth on cabinets and shelves. Cabinets and shelves are also deteriorated.
- Visible microbial growth on ceiling near light fixture
- Visible microbial growth on swim gear
- Dust and debris on HVAC return grills
- Concrete floor needs to be painted/sealed
- Light fixture needs bulbs replaced
- Door does not close properly

Recommendations:

Site Based Maintenance:

- Clean ceiling at light fixture with Wexcide disinfectant solution
- Remove/replace swim gear with microbial growth
- Clean HVAC return grills with Wexcide disinfectant solution
- Paint/seal concrete floor
- Replace bulbs in light fixture
- Continue to monitor this location for any signs of microbial growth as well as dust and debris accumulation and clean as appropriate

Physical Plant Operations Division:

- Evaluate and repair HVAC unit
- Evaluate air vent for proper operation
- Install grill in door to increase air exchange
- Evaluate cabinets and shelves and remove/replace as appropriate
- Evaluate door and repair as appropriate
