SUBJECT: Indoor Air Quality (IAQ) Assessment FISH 602

On September 29, 2006 Kenneth Partee conducted a follow up assessment of FISH 602 at **Royal Palm Elementary School**. The assessment consisted of a reevaluation walkthrough of the previously identified areas to assess the current condition of the location with regard to indoor air quality. This assessment included reviewing previously generated work orders as well as observations of the areas of concern as stated in the IAQ Assessment performed on August 10, 2006 by the IAQ Assessment Team. Attached are the findings of this assessment along with recommendations for further assessment, remediation, or corrective actions, if needed.

Generally, the IAQ Assessment did not identify any existing conditions significantly impacting IAQ and thereby presenting immediate health and safety concerns to building occupants. However, due to individual sensitivities and predisposing health factors, it is possible that some building occupants may elicit a health response to agents and / or conditions identified during the evaluation. Therefore, to further improve IAQ, prevent development of future IAQ-related problems, and to reduce the potential for IAQ-related complaints by building occupants, the IAQ Assessment Team recommends appropriate follow up of each item identified and listed in the attached evaluation.

Should any questions arise, or if the current concerns continue after the attached recommendations have been addressed, please feel free to contact me at 754-321-3200.

Surfaces in Ro	oom No	Yes	Yes		Clean a	s appropri	ate	

Observations

Findings:

- Dust build up on floor

- Dust build up on environmental surfaces

- Temperature was low and humidity level was slightly elevated

- Teacher's desk was impacted with mold and has been removed from the classroom

Recommendations:

Site Based Maintenance:

- Clean and sanitize floor

- Clean environmental surfaces throughout the room

- Adjust thermostat to increase temperature and lower humidity level. Continue to monitor condition and initiate a work order to Physical Plant Operations to evaluate the HVAC system if temperature does not improve.

- Continue to monitor this location for any signs of microbial growth as well as dust and debris accumulation and clean as appropriate
