Indoor Air Quality (IAQ) Assessment

Custodial Issues Addressed
Custodial Issues Not Addressed

Telephone: 754-321-3200

Facsimile: 754-321-3290

On November 2, 2007 I conducted a follow up assessment of Portable 397C at **Indian Ridge Middle School**. The assessment consisted of a reevaluation walkthrough of the previously identified area to assess the current condition of the location with regard to indoor air quality. This assessment included reviewing previously generated work orders, if applicable, as well as observation of the area of concern as stated in the IAQ Assessment performed on July 26, 2006. Attached are the findings of this assessment along with recommendations for further assessment, remediation, or corrective actions, if needed.

The IAQ assessment did identify one or more existing conditions impacting IAQ and has generated appropriate work orders to correct deficiencies in systems and maintenance that could contribute to decreased indoor air quality. At the time of the assessment, these concerns were not an immediate health or safety concern to building occupants. However, due to individual sensitivities and predisposing health factors, it is possible that some building occupants may elicit a health response to agents and / or conditions identified during the evaluation. Therefore, to further improve IAQ, prevent development of future IAQ-related problems, and to reduce the potential for IAQ-related complaints by building occupants, the IAQ Assessment Team recommends appropriate follow up of each item identified and listed in the attached evaluation.

Please ensure that your Head Facilities Serviceperson receives a copy of this correspondence so that the recommendations requiring their attention can be addressed. Within two weeks a representative from the Custodial/Grounds Department will conduct a follow-up visit to ensure that all issues have been appropriately addressed.

Should any questions arise, or if the current concerns continue after the attached recommendations have been addressed, please feel free to contact me at 754-321-3200.

## Recommendations:

### Site Based Maintenance:

- Temperature should be set to between 72-78 degrees
- · Continue to monitor this location for any signs of microbial growth as well as dust and debris accumulation and clean as appropriate

- Physical Plant Operations
   Evaluate cause of rusted light grids and repair as appropriate. Repair/replace light grids as appropriate.
   Evaluate cause of elevated moisture in East and West walls and repair as appropriate. Repair/replace wall material as appropriate.
