

UPDATE INFORMATION ON DATA WAREHOUSE TABLES

Tables are updated in either near-real-time or nightly. Near-real-time means that the information is generally in the data warehouse within a few minutes of the time it is entered into TERMS. Occasionally, during high processing periods, it may take a little longer. We are currently working on adding more tables to the near-real-time updates. Keep in mind though, that if a report has a mixture of information, the data may not all appear on the report until the next day.

The following tables are updated in Near-Real-Time.

1. Student
2. Student Schedule
3. Master Schedule
4. Student Absence
5. Academic History
6. Assignment History
7. Course

The following tables are in the process of being converted to Near-Real-Time.

1. Student Contact
2. School Staff
3. Health Condition
4. LEP Program
5. ESE Program
6. Dropout Prevention Program
7. Federal / State Programs

All other tables are updated in nightly.
