Breakfast Times

It has come to our attention that some school administrators, due to an increased number of students who participate in the breakfast programs, have had to change the starting time of the breakfast program. This time change may in some cases, affect the operational times of the school zone yellow flashing lights and the schedule of the crossing guards, (if applicable) that service the school.

If the starting time of the breakfast program for the schools in your area is more than 30 minutes prior to the board approved starting time of the school, please have the principal of the school call Environmental Health & Safety.

Please have them include the starting time of the breakfast program, name of the affected school along with a contact name and phone number for any follow up information if needed.

The Environmental Health & Safety Department staff will check with the appropriate agency to make sure that the operational time(s) of the school zone flashing lights and any scheduled crossing guard(s) correspond to the breakfast starting time. This information will enhance the safety of the students who walk or ride a bike to attend the breakfast program as well as keep the school zones in compliance with state statutes.

If you have any questions, please contact the Environmental Health & Safety Department at 754-321-4200.
